

## AMENDMENTS TO THE FIGURES:

### FIGURE 1 (Amended)

# 11 is added and is a wire or fiber optic cable capable of transmitting data and images.

Support is found in original Claim 7. The stabilized buoy platform of Claim 1 wherein the device and/or tools can be operated from a remote location via wire or wireless control.

A shower head type device # 14 is added. Support is found in Paragraph 0015. "In firefighting applications, where fire boats, probably at least 30' long with humans would be unable to approach a burning object, a low profile buoy, such as the remote controlled buoy in Grober 10/236,847 can approach a fire, easily keep its circular shape cool with a shower-like stream of water, keep cameras trained on the fire, and use water cannon mounted on the stabilizer to pump water or chemical retardants into flames.
